Species distribution charts

Annelida:
Polychaeta 2

SPECIES DISTRIBUTION

Distributional information has been included for 370 benthic organisms representing the following invertebrate groups:

Annelida	-Polychaeta
Arthropods	-Amphipoda Copepoda (Harpacticoida) Cumacea Decapoda Isopoda
Echinodermata	-Asteroidea Crinoidea Echinoidea Holothuroidea Ophiuroidea
Mollusca	'Gastropoda Pelecypoda

Only the benthic invertebrates reported by investigators currently active in the Beaufort Sea were selected for plotting on distribution charts. These organisms include those collected by:

Dr. A.G. Carey, Jr. Oregon State University
-continental shelf and slope stations between Cape Halkett and Barter Island

Dr. H.M. Feder, University of Alaska
-Prudhoe Bay area

Dr. J.W. Wacasey, Dept. of Environment, Canada
-Eskimo Lakes region

Additional distributional information has been incorporated, however, for those invertebrates which have also been found by the University of Alaska around the Colville River delta, or which have been reported from collections made by Dr. G.E. MacGinitie near the Naval Arctic Research Laboratory at Point Barrow.

The organisms which have distribution charts have been indicated on the species list with a capital "C" preceding the species name.
